| 4-5. Update Command execution.....             | 9  |
| 4-6. Check the operation of the equipment..... | 11 |

# 1. The names of each part

The IoT Edge Mini is configured as follows.

## 2. Mainboard Specifications

| Category  | Items                           | Specifications                              |
|-----------|---------------------------------|---------------------------------------------|
| Wi-Fi     | Protocols                       | 802.11 b/g/n (802.11n up to 150 Mbps)       |
|           | Frequency range                 | 2.4 GHz ~ 2.5 GHz                           |
| Bluetooth | Protocols                       | Bluetooth v4.2 BR/EDR and BLE specification |
| Hardware  | Integrated crystal              | 40 MHz crystal                              |
|           | Integrated SPI flash            | 4 MB                                        |
|           | Operating voltage               | 3.0 V ~ 3.6 V                               |
|           | Operating current               | Average: 80 mA                              |
|           | Minimum current by power supply | 500 mA                                      |
|           | Operating Temp.                 | -40 °C ~ +85 °C                             |
|           | Moisture sensitivity level      | Level 3                                     |

## 3. Sensor Specifications

### 3-1. Temperature/humidity sensor

| Category          | Specifications     |
|-------------------|--------------------|
| Input Voltage     | 5V                 |
| Power consumption | 300mA              |
| Output current    | 8mA                |
| Sampling period   | 2 sec              |
| Interface         | I2C                |
| Temperature Range | -40-80 °C ± 0.5 °C |
| Humidity Range    | 20~90% RH ± 2 % RH |

### 3-2. Motion sensor

| <b>Category</b>  | <b>Specifications</b> |
|------------------|-----------------------|
| Size             | 30*21*12mm            |
| Fixing hole      | 3mm                   |
| Hole distance    | 15mm                  |
| Input voltage    | 5V                    |
| Output           | 3V                    |
| Output current   | 1ma                   |
| Output delay     | about 3 seconds       |
| Sensing angle    | 100°                  |
| Sensing distance | about 6m              |

### 3-3. Flame detection sensor

| <b>Category</b> | <b>Specifications</b> |
|-----------------|-----------------------|
| Spectrum range  | 760nm ~ 1100nm        |
| Detection angle | 0 - 60 degree         |
| Power           | 3.3V ~ 5.3V           |
| Mounting hole   | 3.1mm                 |
| Weight          | 2g                    |
| Package size    | 8.0 * 6.0 * 1.0cm     |

### 3-4. Dust sensor

| <b>Category</b>              | <b>Specifications</b>              |
|------------------------------|------------------------------------|
| <b>Particle size range</b>   | 0.3 $\mu$ m ~ 10 $\mu$ m           |
| <b>Measurement range</b>     | 0 ~ 1,000 $\mu$ g/m <sup>3</sup>   |
| <b>Resolution</b>            | 1 $\mu$ g/m <sup>3</sup>           |
| <b>Respond time</b>          | 1sec                               |
| <b>Time to first reading</b> | ≤ 8 seconds                        |
| <b>Working condition</b>     | -10~ 60°C, 0 ~ 95%RHnon-condensing |
| <b>Storage condition</b>     | -30~70°C,0~95%RHnon-condensing     |
| <b>Working current</b>       | ≤100mA                             |
| <b>Standby current</b>       | ≤200 $\mu$ A                       |
| <b>MTTF</b>                  | 37,297hr(continuous turn on)       |

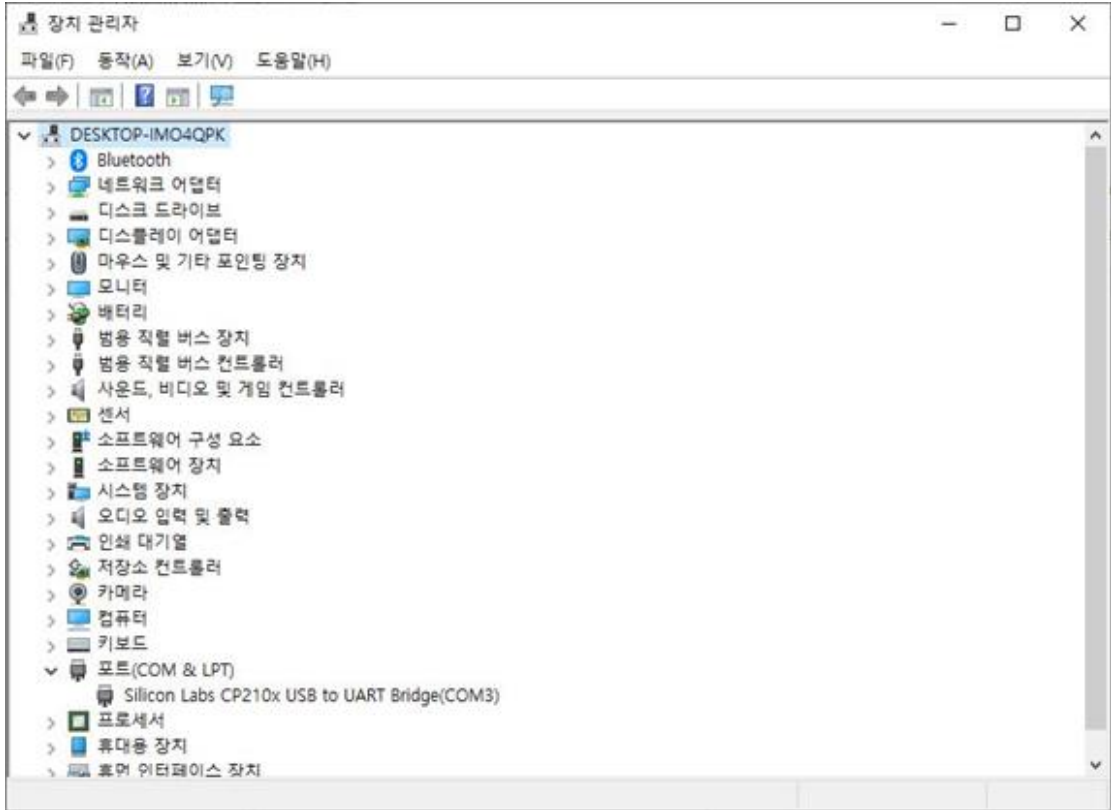

### 3-5. CO2 sensor

| <b>Category</b>                |                | <b>Specifications</b>     |
|--------------------------------|----------------|---------------------------|
| power consumption              |                | 48 mA at 1.8V             |
| Interface                      |                | I2C                       |
| Output                         |                | TVOC and CO2eq            |
| Measurement range              | -              | 0 ppm to 1000 ppm         |
| Specified range                | Ethanol signal | 0.3 ppm to 30 ppm         |
|                                | H2 signal      | 0.5 ppm to 10 ppm         |
| Accuracy                       | Ethanol signal | typ.: 15% of meas. value  |
|                                | H2 signal      | typ.: 10% of meas. value  |
| Long-term drift <sup>3,4</sup> | Ethanol signal | typ.: 1.3% of meas. value |
|                                | H2 signal      | typ.: 1.3% of meas. value |
| Resolution                     | -              | 0.2 % of meas. value      |
| Sampling frequency             | -              | Max. 40 Hz                |

## 4. F/W update

### 4-1 IoT Edge Mini Check connection port

Run the Windows Device Manager.

If you look at the Device Manager port (COM & LPT), the IoT Edge Mini is shown. You can see the connected port is COM3.

### 4-2. Unzip the attached file

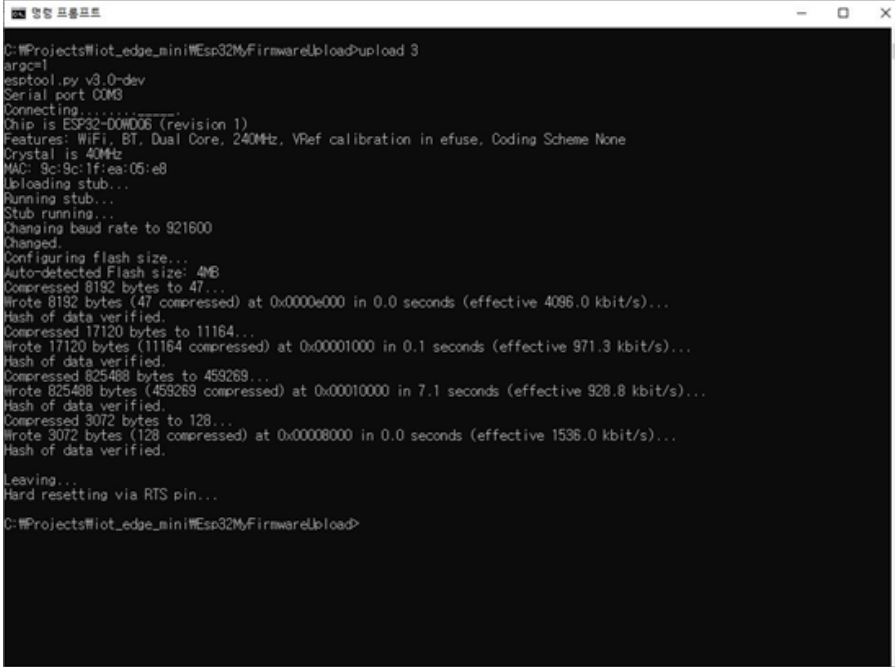

### 4-3. Run Windows Command Prompt

### 4-4. Move to uncompressed folder

## 4-5. Run the Update command

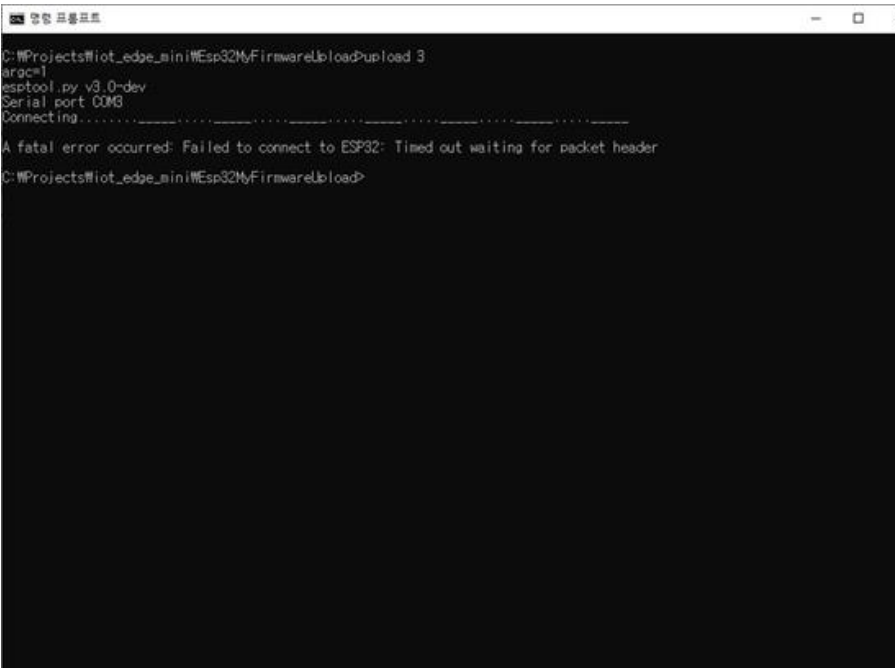

upload 3 (3 is the COM Port number verified by the Device Manager)

```
C:\Projects\Iot_edge_mini\Esp32MyFirmwareUpload>upload 3
argc=1
esptool.py v3.0-dev
Serial port COM3
Connecting.....
Chip is ESP32-D0W006 (revision 1)
Features: WiFi, BT, Dual Core, 240MHz, VRef calibration in efuse, Coding Scheme None
Crystal is 40MHz

```

<Figure 1> F/W Update Success Screen

If the update fails or fails as shown in the attached image below,

```
C:\Projects\Iot_edge_mini\Esp32MyFirmwareUpload>upload 3
argc=1
esptool.py v3.0-dev
Serial port COM3
Connecting.....
A fatal error occurred: Failed to connect to ESP32: Timed out waiting for packet header
C:\Projects\Iot_edge_mini\Esp32MyFirmwareUpload>
```

<Figure 2>F/W Update Failure Screen

As shown in yellow above, when searching for ESP32 Board, you can find the items on the ESP32 Board F/W Update starts when the boot button is pressed.

## 4-6. Check the operation of the equipment

Run Terminal Emulator (Terminal or other) to connect to F/W Update above  
Open COM Port on 115200bps to view equipment activity logs.

```
COM3

<Figure 3> Equipment Operation Log Screen

As shown on the screen above, the values read from each sensor are displayed, and if you check this value, you can know whether the sensor is operating normally.

- cds : Illumination sensor value
- pir : Motion detection sensor value
- fire : Flame detection sensor value
- co2, tvoc : co2 sensor value
- pm\_\_: Dust sensor value
- temp : Temperature sensor value
- humi : Humidity sensor value

# IoT Edge Mini User's Guide

[S2K-MN-002 v.0.5 draft version]

## 1. LED Explanation

Power LED : LED indicating power status

movement LED : LEDs indicating the operational status of the IoT Edge Mini

- Mode Selection Notification : LED blinks fast for 10 seconds (Blink)
- WiFi connection notification: LED flashes every 0.5 seconds (Blink)
- WiFi Data Transfer Notification: LED flashes every 1 second (Blink)
- Bluetooth operation notification: LED flashes twice quickly every 1 second (Blink)

## 2. Button Description

Initialization button : System reboot, button used to select mode

### 3. Connecting Devices

Power DC 9V

RS-232C

220V

Plug the jack into the back cable of the IoT Age mini and connect it to an outlet.

Install the IoT Edge mini application on your smartphone and connect to Bluetooth or Wi-Fi.

## 4. Behavior Description

### 4-1. Select Mode (WiFi Mode, Bluetooth Mode)

When the power is first turned on, the power LED is on, and the motion LED flashes quickly for 10 seconds. Press the "Initialize button" on the back within 10 seconds to operate in Bluetooth mode. After 10 seconds without pressing the "Initialize Button", the device will operate in WiFi mode.

### 4-2. WiFi Mode

Attempt to connect to the configured router and send sensor data to the server when the connection is complete.

Router connection stage: The operation LED flashes every 0.5 seconds.

Data transfer step : The action LED flashes every 1 second.

### 4-3. Bluetooth Mode

Use the smartphone app to set up router information for WiFi access.

Bluetooth operation: The operation LED flashes twice quickly every 1 second..

### 4-4. System reboot

Press "Initialize Button" at any time during WiFi or Bluetooth mode operation. The system will reboot and "Select 3-1 mode" will start.

## 5. Server Description

The Server receive data from lot Edge Mini device when operating in Wifi mode. The connection information of the server is preset in the IoT Edge Mini App.

### 5-1. Connection screen

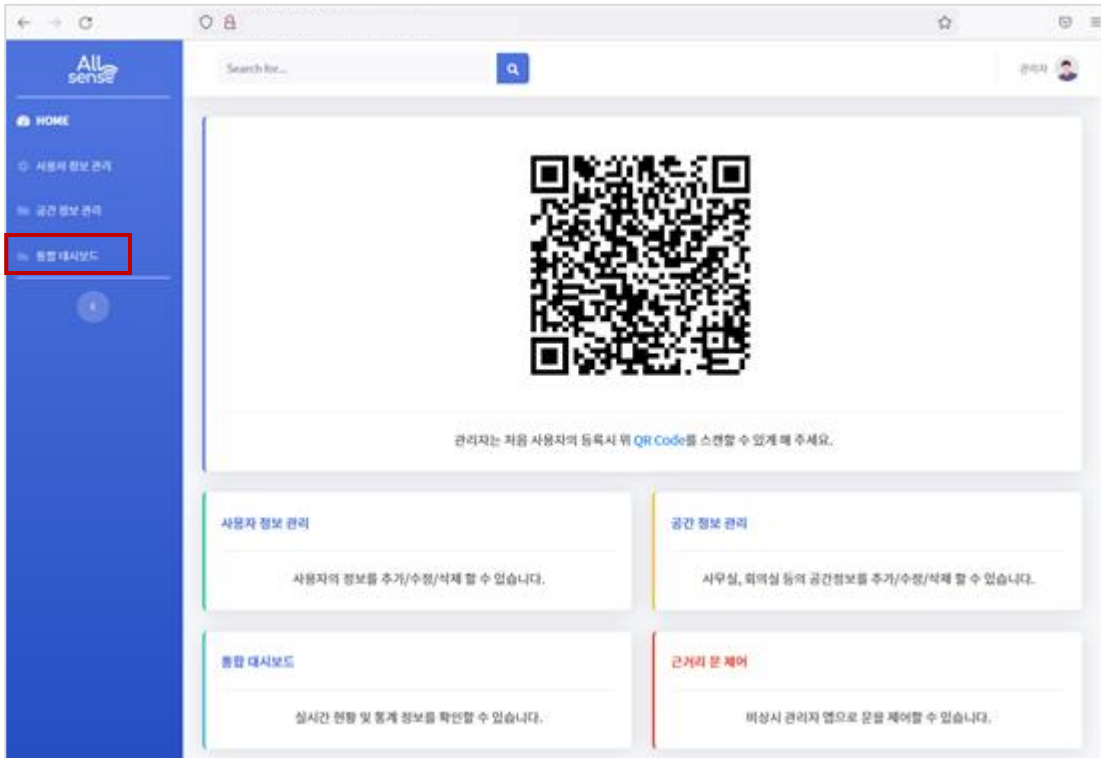

공간예약 시스템  
관리자 로그인

로그인 하기

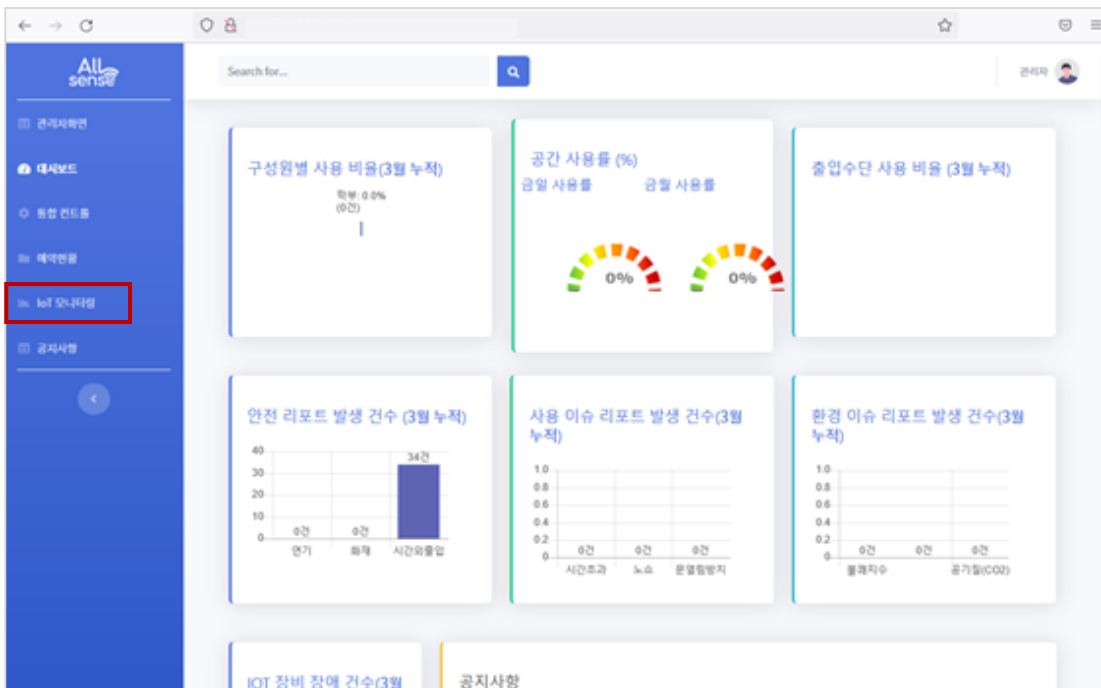

☎ 이용안내 02-3291-2200  
✉ info@kounosoft.com  
문의 가능시간 : 평일 오전 9시 - 오후 6시

## 5-2. Home screen

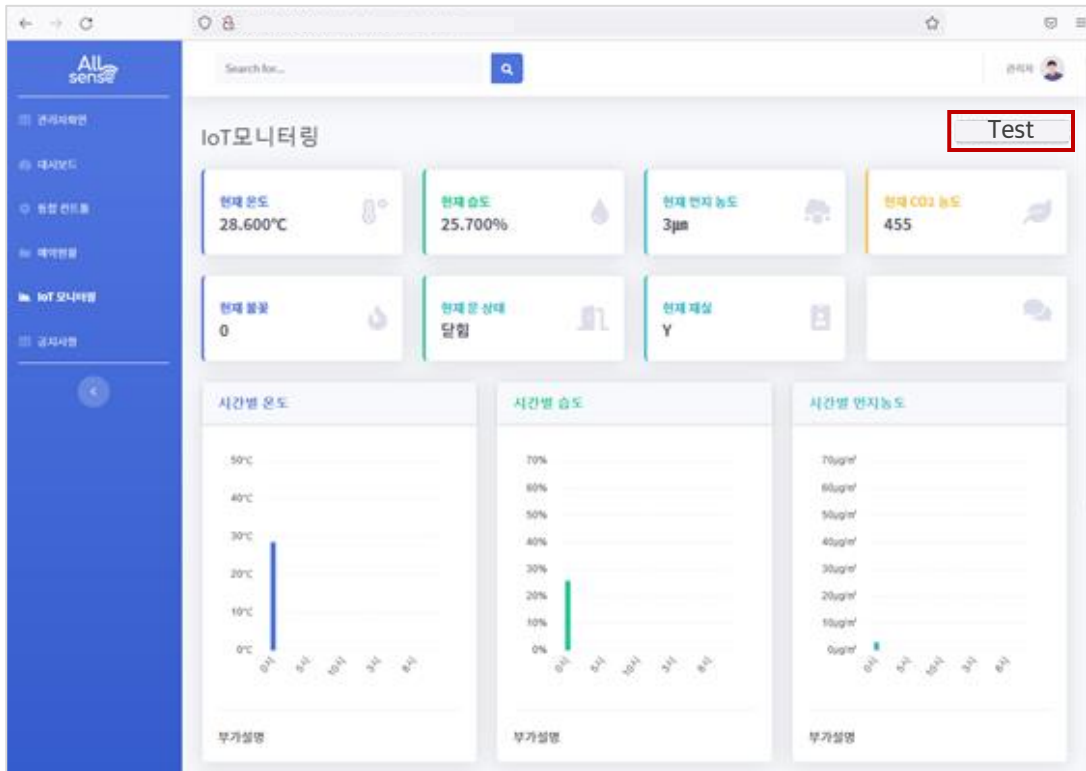

Click "Integrated Dashboard" from the menu..

## 5-4. Integrated Dashboard Screen

Click "IoT Monitoring" from the menu.

## 5-4. IoT Monitoring Screen

Click "Test" in the list box on the right.

Sensor data information transmitted from IoT Edge Mini equipment in graph format is displayed on an hourly basis.

## 6. App Description

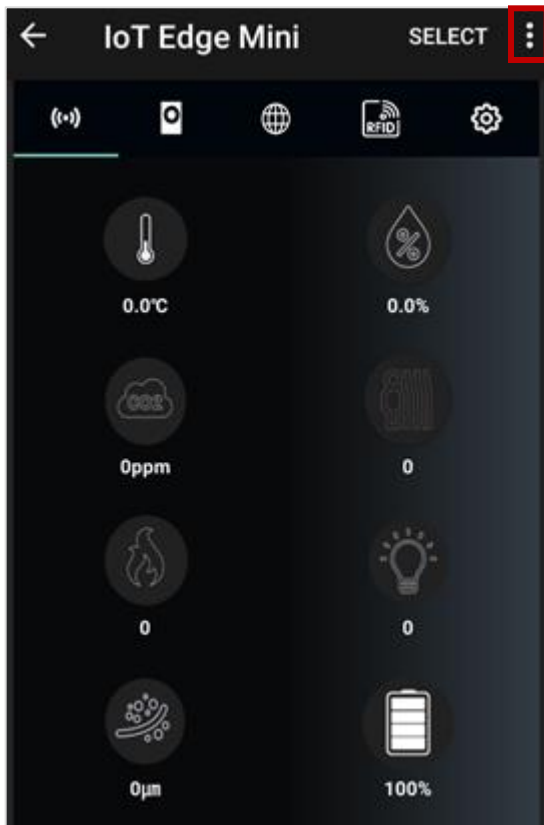

The app for iOS is currently under development. The android app is mainly discussed here.

### 6-1. Installing the app

You can access the Google Playstore, search with the "IoT Edge Mini" and install it.

### 6-2. Start the app

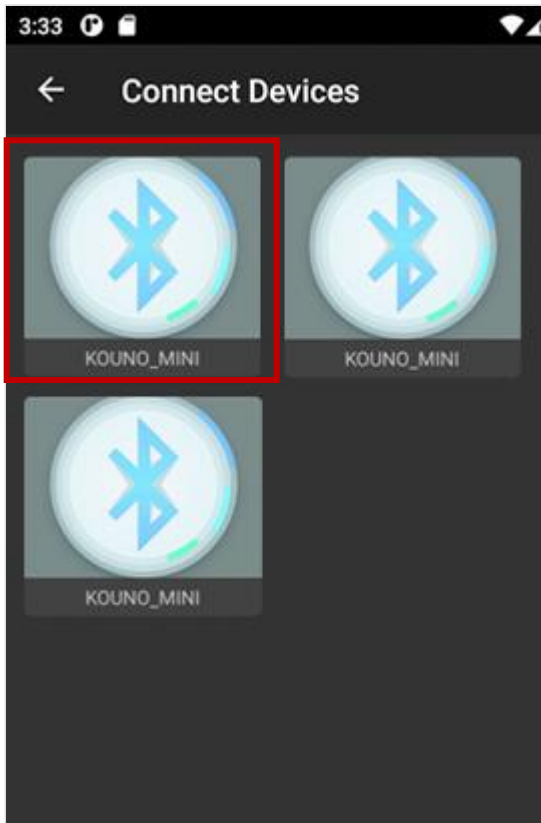

Launch the app and use Bluetooth to get IoT Edge Mini. Touch the menu icon to connect.

### 6-3. Start the app

After running the app, touch the menu icon to connect to the IoT Edge Mini with Bluetooth.

#### 6-4. IoT Edge Mini Equipment Discovery

when the Bluetooth Equipment Discovery screen is displayed, Search for "KOUNO\_MINI" among the devices that were searched. Once the device is found, touch it and Connect it..

#### 6-5. IoT Edge Mini (KOUNO\_MINI)

When connected to IoT Edge Mini equipment normally, sensor data from IoT Edge Mini is received It is displayed on the screen. The time displayed on the screen is the sensor data collection status of the IoT Edge Mini So it might take a few seconds.

## 6-6. IoT Edge Mini Remocon Function

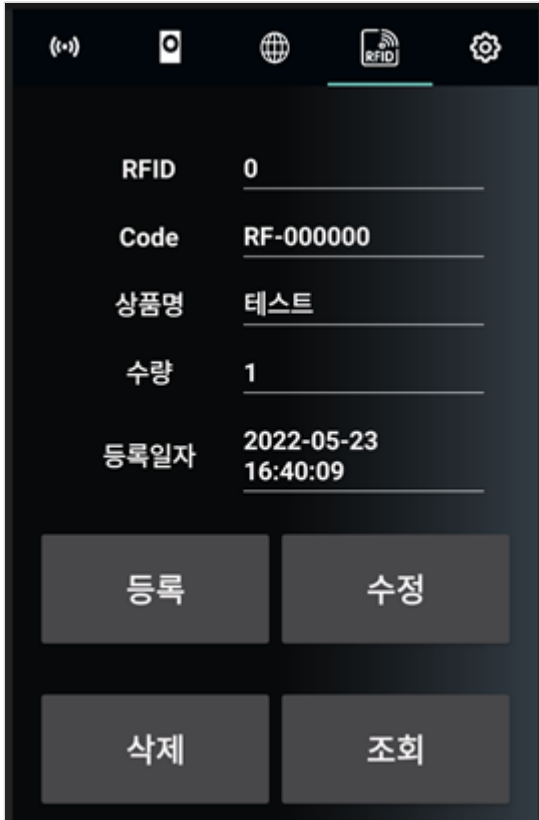

The IoT Edge Mini offers infrared transmission capabilities  
Use to turn on/off external equipment  
As a function, this function is an option.  
(To turn on and off external equipment, the remote control protocol of external equipment is used by IoT Edge Mini  
It needs to be implemented in firmware, but the remote control protocol varies from device to device, so you need to update the firmware for each device you want to control.).

## 6-7. IoT Edge Mini Server Connection function

This page is for accessing the Kounosoft AllSense server from the IoT Edge Mini.

## 6-8. IoT Edge Mini RFID Function

|      |                        |
|------|------------------------|
| RFID | 0                      |
| Code | RF-000000              |
| 상품명  | 테스트                    |
| 수량   | 1                      |

When connecting RFID Reader to an external Serial Port on the IoT Edge Mini, the data of the RFID Tag can be found It can be processed.  
(This function is optional.)

## 6-9. IoT Edge Mini setting

|         |                                                                       |
|---------|-----------------------------------------------------------------------|
| Mode    | <input checked="" type="radio"/> WIFI <input type="radio"/> Bluetooth |
| Room ID | 10001                                                                 |
| SSID    | SSID                                                                  |
| Key     | key                                                                   |
| DHCP    |                                                                       |
| IP 주소   | 192.168.0.2                                                           |
| Subnet  | 255.255.255.0                                                         |

SAVE REBOOT

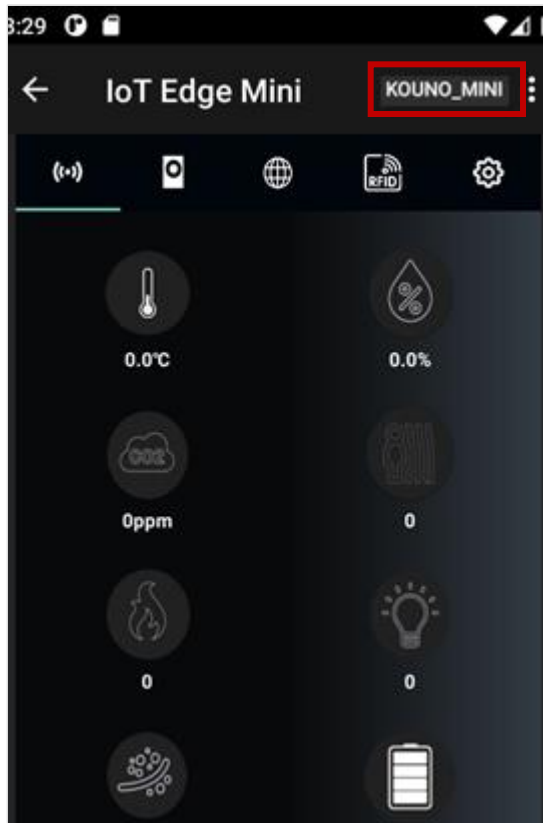

The setup screen is a screen that sets the WiFi settings of the IoT Edge, and sets the SSID and connection key of the router you want to connect to and saves it.  
The saved settings are rebooted by the instrument

(The IoT Edge Mini supports WiFi 2.4 Ghz only. WiFi 5Ghz is not detected and connected.)

The SSID and access key can be set up to 13 digits.

## 6-10. IoT Edge Mini Disconnecting

The red part of the figure above shows the connection status of the IoT Edge Mini equipment. When connected, touch this button to disconnect the IoT Edge Mini and the name of the disconnected device will be displayed. (KOUNO\_MINI in this case)

If the name of the machine is displayed, touch it again to reconnect.

(If the app was first launched, the connection information for the IoT Edge Mini is missing, so it is displayed as "SELECT").

## 7. precautions

Do not spray or soak the product.  
Causes product damage.

When pets eat products,  
Don't let it be used as a toy.

Do not damage the power plug.  
Causes product damage.
